PROFESSIONAL SUMMARY

Flutter Developer with 2+ years of experience and a proven track record as a sole developer who has independently built, released, and maintained Dazzles, a live enterprise application on both the Google Play Store and Apple App Store. Proficient in Clean Architecture, Riverpod, BLoC, and Provider state management, with a strong track record delivering real-time features via WebSocket and WebRTC. Experienced in full release ownership, including CI/CD pipelines, Fastlane automation, and App Store Optimisation (ASO). Adept at writing testable, maintainable Dart code with unit, widget, and integration test coverage.

WORK EXPERIENCE

Flutter Developer | Crisant Technologies — Mysore, Karnataka | Oct 2025 – Present

- Sole developer — built and shipped Dazzles, a role-based enterprise management application for the textile industry; built on Clean Architecture with Riverpod state management and released to the Google Play Store and Apple App Store, covering 5+ user roles and 10+ feature modules with full release ownership.
- Architected a persistent WebSocket client (dart:io) with exponential-backoff auto-reconnect, eliminating polling overhead and delivering real-time visitor tracking events at sub-200ms latency — a 60%+ improvement over prior REST polling intervals.
- Deployed the Visitor Management System (VMS) — check-in and check-out workflows streamed over WebSocket with instant admin UI sync; integrated FCM push notifications achieving 99%+ delivery reliability across Android and iOS, serving 100+ daily check-ins.
- Spearheaded barcode and QR code scanning (mobile_scanner) with a custom overlay UI; product lookups via Dio + Retrofit complete in under 300ms, eliminating manual data entry across 500+ product SKUs and reducing entry errors by 90%.
- Established TDD practices with flutter_test, authoring 40+ unit and widget tests that maintained 0 critical regressions across 6+ production releases.

App Store: apps.apple.com/in/app/dazzles/id6746066647

Play Store: play.google.com/store/apps/details?id=com.dazzles.app

Flutter Developer Intern | Bridgeon Solutions — Kochi, Kerala | Jan 2025 – Sep 2025

- Crafted mobile application features using Flutter and Dart with responsive UI/UX across Android and iOS devices, building 15+ reusable widget components that reduced feature development time by ~30%.
- Connected RESTful APIs and managed application state using Provider and GetX, enabling scalable architecture across 8+ live project modules with zero data inconsistency incidents.
- Delivered 8+ modules end-to-end (UI to API integration) across 2 live projects — an educational institution management app and a social media application — within a 9-month internship.
- Boosted UI rendering performance by eliminating redundant widget rebuilds, reducing average frame render time by 25% and achieving a consistent 60fps on mid-range Android devices.
- Worked within an Agile/Scrum team under senior engineering guidance, completing 3 sprints per month and contributing production code reviewed and merged across 2 live client projects.

Developer Associate | Maathra Technologies — Kochi, Kerala | Sep 2023 – Apr 2024

- Authored and maintained Oracle SQL and PL/SQL database solutions, optimising 20+ queries that cut data retrieval time by ~35% across 5+ ERP modules, directly improving report load speeds for 3 client departments.
- Engineered 4 custom ERP modules using Oracle APEX — including interactive dashboards, automated reports, and business logic workflows — reducing manual reporting effort by 50% for client teams.
- Executed 3 data migration pipelines and 2 third-party system integrations, migrating 100,000+ records with 99.9% data integrity across environments.

EDUCATION

Post Graduate Diploma in Data Science | Apr 2022 – Apr 2024

Imarticus Learning, Bengaluru, Karnataka (Part-time / Distance Learning)

Bachelor of Computer Application (BCA) | Jul 2019 – Mar 2023

University of Calicut — MES Asmabi College, Thrissur, Kerala

TECHNICAL SKILLS

Mobile Dev: Flutter, Dart, Cross-Platform Development, iOS Development, Android Development

State Mgmt: Riverpod, BLoC, Provider, GetX, MVC Architecture, Clean Architecture

Backend & DB: Firebase, Supabase, Hive, Node.js, Oracle SQL, PL/SQL, MySQL, Go (Golang)

API & Comms: RESTful APIs, WebSocket, WebRTC, Dio, HTTP, JSON, Razorpay, Third-Party Integration

UI/UX: Figma, Material Design, Cupertino Design, Responsive Design, Custom Widgets, Accessibility

Testing: flutter_test, bloc_test, Unit Testing, Widget Testing, Integration Testing, TDD

Dev Tools: Git, GitHub, Jira, Postman, Swagger, Oracle APEX, Firebase Crashlytics

Deployment: Google Play Store, Apple App Store, CI/CD, Fastlane, Release Management, ASO

Languages: Dart, JavaScript, SQL, PL/SQL, Python

PROJECTS

LoopCall — Telecaller Communication Platform <https://www.loopcall.in>

- Architected a production-grade telecaller communication application from scratch using Clean Architecture and BLoC state management — released to the Google Play Store and Apple App Store, serving active telecaller teams across multiple organisations.
- Developed real-time video and audio calling using WebRTC with WebSocket signaling (dart:io) — persistent connection with exponential-backoff auto-reconnect achieving sub-300ms call setup time and reliable session teardown across 3G, 4G, and Wi-Fi transitions.
- Delivered WebSocket-powered live chat with instant message delivery, read receipts, and typing indicators — sustaining sub-200ms message latency with 0 polling requests, reducing server load by 70% compared with a REST-based approach.
- Integrated Razorpay payment gateway supporting 2 billing models (subscription and per-call) — handled payment initiation, webhook verification, and retry flows, achieving a 98%+ payment success rate.
- Configured FCM push notification delivery for incoming calls — VoIP-style wake-up on iOS via CallKit and Android heads-up notifications, reducing missed call rate to near 0% even when the app is terminated.
- Achieved crash-free production stability via Firebase Crashlytics monitoring; enforced quality with bloc_test and flutter_test suites covering 50+ unit, widget, and integration test scenarios.

Fee Bee — Educational Institution Management App

- Developed a cross-platform mobile application for educational institutions managing 3+ branches, 500+ students, and fee records using Flutter and Dart.
- Consumed backend RESTful APIs built in Go (Golang) with a MySQL database, achieving average API response times under 400ms with secure JWT-based authentication.
- Crafted a responsive UI with 10+ screens ensuring smooth 60fps performance across Android devices ranging from low-end to flagship hardware.
- Applied GetX state management across 6+ feature modules for a clean, maintainable architecture with zero global state leaks.

SNAPVERSE — Social Media App <https://github.com/BijoyRaju/snapverse>

- Launched a social media application supporting 2 authentication methods (email and phone OTP) using Supabase, with session persistence across app restarts.
- Incorporated profile editing, post creation with images, likes, comments, and follow/unfollow features — handling 5+ concurrent real-time interactions per user session.
- Applied Provider state management with MVC Architecture across 8+ screens; leveraged Supabase Storage for profile and post image hosting with average upload times under 2 seconds.
